

OMEGA SYSTEM

INTERNAL OPERATIONAL REGULATIONS

DOCUMENT ID: OMEGA-GEN-001 REVISION: 4.2

STATUS: ACTIVE CLEARANCE: 0

GENERAL OPERATING RULES

This document defines the minimum operational requirements for all OMEGA personnel and authorized operators.

These rules apply to all OMEGA facilities, systems, archives and active investigations.

Failure to comply may result in suspension of access privileges and further review.

01. INFORMATION

1. All information obtained during OMEGA operations must be treated as confidential.
2. Personnel must only access information required for their assigned duties.
3. Information obtained from restricted sources must not be transferred to unauthorized systems.
4. Do not modify an official record unless explicitly authorized.
5. Corrections to official records must preserve the original information.

02. RECORDS

6. Every observation must be recorded.
7. Unknown information must be marked as UNKNOWN.
8. Missing information must not be reconstructed from assumptions.
9. Conflicting records must not be silently corrected.
10. If two official records contradict one another, preserve both records and report the discrepancy.
11. Never alter timestamps, personnel identifiers or incident references without authorization.

03. ANOMALOUS PHENOMENA

12. Do not approach an unidentified anomaly without authorization.
13. Do not establish communication with an anomalous entity unless a protocol specifically permits communication.
14. Do not assume that an anomaly is inactive because no activity has been observed.
15. Do not assume that an anomaly is contained solely because containment systems report normal status.
16. Unexplained changes in an anomaly's behavior must be reported immediately.

04. CONTAINMENT

17. Containment procedures take priority over standard operational procedures.
18. Personnel must not enter restricted containment areas without clearance.
19. Do not disable, bypass or interfere with containment systems.
20. If containment status becomes uncertain, treat the containment as compromised until verified.
21. Do not rely on visual confirmation alone when verifying containment.

05. SYSTEM SECURITY

22. Never attempt to bypass OMEGA authentication systems.

23. Never use another operator's credentials.
24. Report unexpected system behavior to Security.
25. Unexpected files, messages, personnel records or system events must be treated as unverified.
26. Do not delete an unfamiliar record solely because it appears corrupted.
27. Preserve system logs whenever unauthorized activity is suspected.

06. PERSONNEL

28. Personnel must report unauthorized access immediately.
29. Personnel must not disclose investigation details to civilians.
30. Personnel must follow assigned clearance restrictions.
31. Personnel records are considered operational documents.
32. If a personnel record contains information that cannot be verified, mark the information UNKNOWN.

07. IRREGULARITIES

The following events require immediate documentation:

- unexplained system activity
- missing records
- duplicated records
- impossible timestamps
- unidentified personnel
- unauthorized communications
- unexpected changes in containment status
- discrepancies between physical and digital records
- information appearing before its recorded creation date

IMPORTANT

OMEGA records are operational evidence.

An incomplete record is preferable to an altered record.

A corrupted record must not be assumed to be meaningless.

A contradictory record must not be assumed to be incorrect.

If information cannot be verified:

MARK IT UNKNOWN.

DO NOT ASSUME.

FINAL DIRECTIVE

If these rules conflict with an active containment protocol, follow the highest authorized security directive. If no applicable directive exists, preserve the evidence and await further instruction.
